UNIT OUTLINE

This unit examines international trade both in theory and practice. It first reviews the theories related to inter and intra industry trade determination and the empirical evidence supporting them. It then examines trade policies, covering a wide range of topics, illustrated by up-to-date case studies.

The unit has a policy approach and aims at also providing students with a good understanding of major trade issues around the world and the effects of globalisation on trade. It focuses on current applications of theoretical principles.

The topics included in ECON 847 are:

- 1. The Global Economy**
- 2. The Theory of Comparative Advantage.**
- 3. Trade and Income Distribution**
- 4. New Theories of Trade**
- 5. Trade Restrictions: Tariffs**
- 6. Trade Restrictions: Non-Tariff Barriers**
- 7. Political Economy of Trade and WTO's Contentious Issues**
- 8. Trade Blocs**
- 9. Trade and Development**
- 10. International Factor Movements: Immigration and Foreign Investment**
- 11. Australia's Trade and Balance of Payments**
- 12. International Trade and Exchange Rates**

The numbering of topics above is not related to the number of lecture weeks. Some topics are shorter/longer than others.
