**LEARNING OUTCOMES**

The globalization of financial markets offers opportunities but it also introduces new risks. As a response, novel investment techniques and market as well as credit risk management models have been introduced or are in the development stage. This unit, will help you manage, and keep abreast of, changes which will accompany you in your future professional career.

The learning outcomes of this unit are:

1. Demonstrate and understanding of the concepts and processes of International Financial Markets
2. Understand foreign exchange markets and what drives exchange rate determination
3. Value, describe and evaluate Financial and Foreign Currency Derivatives
4. Understand and explain the concepts of transaction and operating exposures in international markets
5. Understand the concepts of portfolio creation and international finance
6. Analyse the issues surrounding the global availability of capital in the context of International Portfolio Theory

**GRADUATE CAPABILITIES**

In addition to the discipline-based learning objectives, all academic programs at Macquarie seek to develop the capabilities the University's graduates will need to develop to address the challenges, and to be effective, engaged participants in their world.

This unit contributes to this by developing the following graduate capabilities:

1. Application of Finance Theory to International Markets
2. Ability to analyse situations from an International Finance perspective
3. Critically analyse current and historical issues in International Finance
4. Use of Integrative thinking to understand the role that International Finance has in Corporate Finance.
5. Solve problems relevant to Finance from an International Finance perspective.

**TEACHING AND LEARNING STRATEGY**

Each lecture is self-contained and structured according to the summary provided in the “Course structure and topics” section above. Students are expected to read the
relevant chapters prior to the lecture, so that they are familiar with the material to be covered. This will greatly enhance your learning experience.

Dealing with advanced material in our subject area requires a range of generic skills. This unit aims at developing such skills. The lectures and in particular the assignment are tailored to enhance critical analysis, problem-solving and creative thinking, comprehension, computing and writing skills.

Class discussions promote verbal expression while contributions to the Bulletin Board improve your writing skills, which through email serve as an increasingly important communication medium. However, you will only acquire these skills by attending classes, immersing yourself into solving the assignment questions and participating in verbal and written class debates.

You should take the time to work on the problem sets, since they will tend to be similar in nature to the problems you see on the test and exam. Solutions will be provided for the assigned selected questions.

**RESEARCH AND PRACTICE**

- This unit gives you opportunities to conduct your own research

**RELATIONSHIP BETWEEN ASSESSMENT AND LEARNING OUTCOMES**

A one hour in class multiple choice test will be conducted in week 4. The purpose of this test is to allow students to assess their progress and identify those students that are struggling with the subject matter. Where students are identified as being at risk they shall be invited to meet with their lecturer to discuss actions that will be implemented to address any issues.
